

Experts in Revision Trauma Surgery

UT Southwestern's orthopaedic surgeons are among the most experienced in North Texas at performing revision trauma surgery to help treat patients with injuries that are complicated, severe, or resistant to healing.

Revision trauma surgery may be needed when:

- A complex traumatic injury requires multiple surgeries or long-term treatment
- A person has experienced a traumatic injury that is not regaining function following treatment
- Further damage has occurred after a trauma surgery
- The implantation or prosthesis used in trauma surgery has not been functioning properly
- The initial surgery for trauma was not as successful as planned

What is revision trauma surgery?

People of all ages can experience trauma or fractures during auto accidents, falls, and other dangerous scenarios. Revision trauma surgery might be needed when a person who experienced a traumatic injury is not regaining function or quality of life following the initial treatment.

Our team has special expertise in treating the following conditions:

- Foot and ankle injuries
- Fractures around a joint replacement
- Hip injuries
- Knee injuries
- Shoulder injuries
- Elbow injuries

Support Services for Revision Trauma Surgery

As a referring provider, we will work closely with you to deliver specialized care for orthopaedic trauma patients. The goal is for these patients to incorporate rehabilitative care before and after the surgery for the best results. Other teams in this support service include physical therapy, occupational therapy, and psychological services.

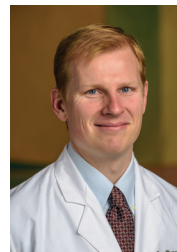

Recognized Trauma Clinic

When to refer a patient:

We are available for referrals of patients with traumatic injuries of the upper and lower extremities as well as post-traumatic orthopaedic conditions. Each patient will receive a personalized treatment plan for the best long-term outcome for their condition.
